**Excellence in engineering and manufacturing -  
Powered by pride**

▶ Respect

▶ Protect

▶ Commit

▶ Inspire

*“We are passionate about the safety of our people, our environment, our community and our industries. There is nothing more important to us than the safety of all our people in all that they do”.*

NIS pursues continuous improvement of our occupational health and safety performance, and have achieved the RoSPA President’s award for consecutive golds since 2006.

NIS is part of a three company group, set up to provide a broad spectrum of engineering services. Each company operates independently, however there is synergy through technology, markets and values with a culture of support and cooperation, bringing added value to our clients.

NIS has been based in Chorley, North West England, since the company was formed in 1983. Our headquarters incorporate our design, manufacturing and project management premises all under one roof.

We have 5000m<sup>2</sup> of production workshop space including two additional high bays, a 20 metre tall test tower, and clean room, all segregated from the main work area. A 20 tonne crane capacity gives NIS the ability to handle very large projects, without the need to hire extra lifting equipment.

Our purpose built engineering facilities are complemented by strategically placed customer facing premises in Cumbria and Berkshire.

From initial contact through to work completion and after sales service, NIS offers a comprehensive, customer focused, project managed solution. Although bespoke solutions are one of our specialities, we recognise the benefits of utilising and integrating existing technologies. Frequently drawing on many years of experience in this field and our diverse industry presence, we optimise value for our customers.

With a culture of safety and innovation, NIS delivers across a wide range of markets, including the nuclear, industrial, security, aerospace and food sectors. This broad industry presence provides excellent opportunities for technology transfer, particularly in our specialist field of equipment integration and automation.

Our robust ISO accredited integrated management system underpins our operations, ensuring the highest standards are maintained. This is further enhanced by our continual improvement programme, ensuring learning from experience and emerging industry best practice is regularly incorporated.

Accredited with EN 1090 EXC3

## Providing full lifecycle engineering services

- Concept and Detail Design
- Development and Simulation
- Manufacture and Integration
- Assembly and Testing
- Installation and Commissioning
- Maintenance and Servicing

Winner of  
'Most dedicated employer'  
STEMNET Awards

Nationally coordinated by STEMNET

NIS takes the responsibility for our people and the environments, communities and industries in which they live and work, extremely seriously. We acknowledge that these are shared responsibilities and involve employees at all levels of the organisation.

Helping to develop an interest in engineering amongst young people, particularly in the local communities, is something that is strongly ingrained in our values. Our trained Science, Technology, Engineering and Maths (STEM) ambassadors provide active support to events across Lancashire, Cumbria and Berkshire.
